DETAILED ACTION

Drawings

Figures 4-6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Yanagimoto (WO 02/055291 A1). Yanagimoto discloses a pressurizing device with a fixed part 3, an output shaft 2 supported slidably in its axial direction by the fixed part3, an input shaft 1 supported by the output shaft movably relative to and in the same axial direction as the output shaft 2, capable of moving rapidly in the axial direction and capable of being coupled to the output shaft 2 so that relative movement does not occur; and a fluid pressure mechanism, provided between the output

Art Unit: 3745

shaft 2 and the input shaft 1, for, when the input shaft 1 and the output shaft 2 move relatively, increasing a thrust force of the input shaft 1 by means of Pascal's principle and transmitting it to the output shaft 2, capable of effecting rapid movement of the output shaft 2 by coupling the input shaft 1 to the output shaft 2 so that relative movement does not occur and moving and effecting high thrust force pressurization of the output shaft 2 by releasing the coupling 41 and allowing the input shaft 1 to move relative to the output shaft 2, and a motive power source (not shown, see col. 6, line 66) of a switching mechanism for switching from the rapid movement to the high thrust force pressurization is mounted outside the fixed part 3, wherein the motive power source is mounted on the output shaft 2.

Allowable Subject Matter

Claims 1-7 are allowed. The improvement comprises at least a third through hole extending in the axial direction from the second fluid compartment to outside is formed in the fixed part, a rod is slidably supported in the third through hole so as to block the third through hole, the valve member is fixed to one end of the rod and a motive power source mounted outside the fixed part is connected to the other end, and the first connecting hole is opened and closed by the motive power source operating and advancing and retracting the valve member in the axial direction.

Prior Art

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of four patents.

Application/Control Number: 10/573,940 Page 4

Art Unit: 3745

Yanagimoto '583, Leohnartsberger et al., Fabrowsky, and Grullmeier are cited to show the pressurizing devices.

Contact Information

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Thomas Lazo whose telephone number is (571) 272-4818. The examiner can normally be reached on Monday-Friday from 8:00 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor Edward Look, can be reached on (571) 272-4820. The fax phone number for this Group is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
